

A smarter way to manage your SaaS applications

with SSO Checklists 

Auvik's latest feature release introduces SSO Checklists for over a thousand applications, designed to help IT leaders identify which of their tools could integrate with Single Sign-On (SSO) but currently are not.

This functionality enables a clear view into the organization's SSO adoption rate, supporting compliance, security, and insurance requirements.

Spend less time searching and more time securing with SSO Checklists

What does this mean for my business?

Action SaaS Discovery Faster

Auvik's SSO Checklists feature provides IT managers with a straightforward list of their applications that support Single Sign-On (SSO) and the ones that are not using SSO. This direct, actionable list reduces the time spent manually identifying these gaps.

Secure Your Business and Centralize Access

Auvik's SSO Checklists feature supports key SSO identification for major platforms like Microsoft Entra ID and Google Workspace. All applications that support these SSO methods will be highlighted in your instance as an opportunity to improve your SaaS security and compliance health.

SSO Discovery for 1,000's of Applications

Remove guesswork and manual online research to determine which applications support your business's preferred identity provider. Constantly maintained and up-to-date, SSO Checklists are a reliable spot for identifying single-sign-on support for the apps you love.

Why choose Auvik SaaS Management?

Auvik SaaS Management is a powerful tool that helps businesses discover, monitor, manage, and secure their SaaS applications. Our platform provides powerful reports, software inventory tracking, and a proprietary SaaS Health Score to protect your business and ensure that your applications are always performing at their best. With Auvik SaaS Management, you can eliminate Shadow IT, maximize savings, and protect your SaaS ecosystems.

Discover, manage, & secure all your SaaS apps
Now, in less than 30 Minutes
